SEALS OF SOUTH AUSTRALIA: biogeography, ecology and management.

Thursday 20th September, 5:30pm.
St Andrews Parish Centre,
43 Church Terrace, Walkerville.

The coastline of South Australia comprises many varied environments, some well understood and others less so. This provides multiple challenges for those wishing to expand our knowledge of the marine environment and for those who must deal with complex marine management issues.

The RGSSA is pleased to welcome Prof Simon Goldsworthy (above) to present our September lecture. Simon leads the Threatened, Endangered and Protected Species (TEPS) sub-program at SARDI. His role is focused on developing research programs and providing management advice on protected marine species including all seals, whales and dolphins, seabirds and pelagic shark species.

This program is recognised nationally and internationally for delivering high quality research on the critical habitat use, foraging and population ecology of TEPS and their interactions with fisheries and aquaculture.

Join us to hear Simon's lecture. A gold coin donation for members (\$10 for non-members) would be appreciated.
